Materiale finto per le prove

Evaluation Summary Report inventato, costruito sulla forma di un ESR Horizon Europe. Nessuna proposta reale, nessun valutatore reale.

Che cosa misura la prova che lo usa sta nel `nota.md` del caso, non qui: un materiale che dichiara i propri tranelli insegna la risposta a chi deve essere misurato.

Evaluation Summary Report

Proposal number: 101999999
Acronym: ANTICIPATE
Call: HORIZON-CL3-2026-DRS-01-99
Type of action: HORIZON-RIA

Evaluation scores

Criterion	Score	Threshold
Excellence	3.0	3
Impact	3.5	4
Quality and efficiency of the implementation	3.0	3
Total	9.5	10

Criterion 1: Excellence

Strengths: the consortium has relevant experience in hydrological forecasting and the objectives are clearly stated.

Weaknesses: the advance beyond the state of the art is asserted rather than demonstrated; no quantitative comparison with existing operational chains is provided. The methodology section is too short to allow an assessment of the soundness of the proposed approach, and the validation strategy is not described. The gender dimension in the research content is not addressed.

Criterion 2: Impact

Strengths: the topic outcomes are correctly identified.

Weaknesses: the pathway from project results to the expected outcomes is not credible, as several claimed impacts are not supported by activities in the work plan. The key performance indicators have no baseline, which makes them unverifiable. The dissemination measures are generic and not targeted at the identified user groups. Sustainability beyond the project duration is not addressed.

Criterion 3: Quality and efficiency of the implementation

Strengths: the work package structure is clear.

Weaknesses: the allocation of person-months is not provided, so the appropriateness of the effort cannot be assessed. The role of one partner is not defined. Risks are described in generic terms. The proposal does not include the clustering work package required by the call.

Overall comments

The proposal addresses a relevant problem but does not reach the threshold for the Impact criterion and remains below the overall threshold. The proposal is not recommended for funding.
